

Modular Robotic Cell

RPC Piegatrici

There are many advantages to using a collaborative robot for sheet metal bending. Thanks to the Modular robotic cell, the bending machine can be used both stand-alone and in collaboration with the cobot, which is placed on a plate that can be easily removed.

Features:

- The use of a Modular Robotic Cell allows to:
 - Reduce the bending cycle
 - Decrease electricity consumption
 - Work multiple shifts even without the presence of an operator
- Other features:
 - Ease of programming
 - Pre-prefect structure
 - Small cell size
 - Reduced economic investment
 - Custom design

Specifications:

- **Software version required**

Polyscope 5.15

- **Dimensions**

4000x4000 cm

- **Dependencies**

Requires compressed air and electrical coupling

- **CERTIFICATIONS AND STANDARD**

CE

- **What's in the box?**

Press brakes

Cobot

Accessories

- **LICENSE TYPE**

One-time purchase
